BizTalk RFID - Deep Dive Workshop – 28th-29th April 2009

Overview

RFID is being deployed across an increasing range and variety of business domains from traditional supply-chain scenarios through to tracking of any critical assets within a business such as specialist equipment within a health-care environment, criminal justice scenario through to critical document tracking in office based environments.

This workshop provides a deep-dive and hands-on experience of the Microsoft platform for RFID. Delivered as a series of hands-on training labs and exercises the workshop takes attendees through major elements to build an RFID solution on the BizTalk RFID platform. **Please note this workshop is Free of Charge.**

Attendees on the workshop will receive a BizTalk RFID starter kit including:

- Free RFID Reader (DLP, simply plugs into USB port on a laptop) & tags
- Free Pro RFID in BizTalk 2009 book
- Free BizTalk Server virtual machine in a box and training labs for evaluation

Agenda

Day 1

Introduction to BizTalk RFID
 Installing BizTalk RFID
